To Customers

From a quality assurance perspective, DISCO guarantees the manufacturing date, not the shipping date. Therefore, the shipping date section currently on the inspection sheet will be changed to sections for the manufacturing date and expiration date. Although the manufacturing date and expiration date are written on the bottle label, it was determined that quality records could not be tracked because the bottle is normally disposed of after use. Including the manufacturing date and expiration date on the inspection sheet will enable quality record tracking. We appreciate your understanding and cooperation.

Timing of Change Over

From the end of August 2020, we will begin using the revised online inspection sheets on the DISCO website. Note: The old version of the inspection sheet can be exported from the DISCO website until the end of 2020.

Inquiries

For more information, please contact your DISCO sales representative or customer engineer.
